

Breakout Session II: New Fit Test Methods

- A user seal check that really works.
- A goal of 'continuous fit check' rather than 'no-fit-test'.

What would make it possible to
never have to use a fit test,
even initially?

The background is a solid blue color. In the lower right quadrant, there are several sets of concentric circles, resembling ripples in water, rendered in a lighter shade of blue. These circles are of varying sizes and are positioned in the bottom right area of the slide.

Would have to be one that required
zero training and zero adjustment.

Is it possible to develop a fit test method that is always available to the user (e.g. part of the respirator)?

No.

Even if you had a perfect detector,
people would have to be trained to
respond to it.

Research Priorities:

What can we do to identify a user seal check that really works?

What constitutes an effective Train-the-trainer for fit testers?
